

Principles of Civil Aviation Legal Framework and Law of International Air Carriage

The aim of the training is to systematically introduce participants with little or no knowledge of aviation to the basics of civil aviation legal issues and, in particular, to the relevant legal framework, the relevant players in aviation legislation and some practical examples of liability law application. Participants will expand their knowledge and increase their acceptance in the field of work they are practising or aspiring to. The intensive training methods lead to a particularly good, sustainable consolidation of the newly acquired aviation knowledge.

The two-day intensive program is designed for employees, managers, project managers, consultants and postgraduate students who have made their way into the aviation industry or are striving to do so on a permanent or project-related basis. The training is also suitable for other participants with an interest in acquiring systematic basic knowledge of civil aviation legislation.

Scope of intensive training

- Historical background of civil aviation legal framework
- Principle of the sovereignty of the air
- Chicago Conference and Chicago Convention
- Technical standardization: ICAO Annexes with Standards and Recommend Practices
- Other international treaties: Tokyo Convention, Hague Hijacking Convention
- EU aviation legislation: EASA as the European aviation administration
- International air transport legal framework
- Bilateral air service agreements
- Deregulation and liberalization of air transport in Europe
- Aviation legislation in Europe and Germany
- Liability law basics
- Aspects of major aviation accidents
- Warsaw Convention
- Amendments of Warsaw Convention
- Innovations by the Montreal Convention
- Third party liability
- European liability legislation
- Denied Boarding Regulation 261/2004: Passenger rights and quasi liability
- Extraordinary circumstances under the DNR
- Practical Examples of Air carrier's liability and mastering its legal implications
